

ODDACA INKSTERS · BHUBANESWAR

# Website & Admin User Manual

A plain-language guide to the public website and the studio CMS

Applies to the Oddaka Inksters production site (React + Supabase).

Two parts: **A — Public website** (for visitors & the studio) and **B — Admin CMS** (for the studio owner).

## Part A — The public website

A1. Pages and how to move around · A2. Homepage · A3. Gallery & tattoo detail · A4. Artists · A5. About · A6. Aftercare · A7. Contact & sending an enquiry · A8. Using the site on a phone

## Part B — The admin area (studio CMS)

B1. Signing in · B2. Dashboard · B3. Tattoos · B4. Artists · B5. Styles · B6. Reviews · B7. Offers · B8. Enquiries · B9. Website details · B10. Homepage content · B11. Help & signing out

## Part C — Running the site

C1. Demo mode vs. live mode · C2. Going live (Supabase + Vercel) · C3. Where your data and files live · C4. Troubleshooting

**One minute rule of thumb:** "Published" means it is visible on the public site. "Hidden" or "draft" means only you can see it in the admin. Nothing on the public site is ever edited directly — everything changes through this admin area.

## Part A — The public website

### A1. Pages and how to move around

The public site is the part visitors see at the main URL. It has the following pages:

| Page          | URL                | What it does                                                                                                            |
|---------------|--------------------|-------------------------------------------------------------------------------------------------------------------------|
| Home          | /                  | Landing page: studio intro, offers, featured tattoos, styles, artists, reviews, Instagram grid, booking call-to-action. |
| Gallery       | /gallery           | Every duty-published tattoo, filterable by style.                                                                       |
| Tattoo detail | /gallery/tattoo-01 | One tattoo: photos, healing video, details and related work. Each tattoo has a permanent, unchanging address.           |
| Artists       | /artists           | The tattoo artists, with their specialties. Click one for the full profile.                                             |
| About         | /about             | The studio story, standards and hygiene practices.                                                                      |
| Aftercare     | /aftercare         | Healing instructions for clients.                                                                                       |
| Contact       | /contact           | Studio details, opening hours, map and the enquiry form (see A7).                                                       |

The menu bar at the top and the footer at the bottom are the same on every page. On a phone the menu collapses into a button.

Every page shows an accurate *page title* and *description* in the browser tab and when links are shared (WhatsApp, Instagram, Google). Tattoo pages are automatically indexed by search engines.

### A2. Homepage

The homepage is the shop window. From top to bottom:

- **Hero** — the big headline. The studio can change the wording and buttons from the admin (see B10).
- **Scrolling text marquee** — decorative strip.
- **Offers strip** — currently live offers (up to three). This section only appears when there is at least one in-date, published offer (see B7).
- **Featured work** — tattoos marked “Featured” in the admin, in a photo grid.
- **Tattoo styles** — the styles that exist in the admin; each shows how many pieces it contains.
- **Artists** — each artist card shows how many featured pieces they have done.
- **Cover-up slider** — an interactive before/after demo (drag the handle).
- **Process & Why Oddaka** — fixed studio content.
- **Client stories** — up to six published reviews.
- **Instagram grid** — six featured tattoo photos linking to Instagram and the gallery.
- **Final call-to-action** — a big “Book / start your tattoo” button leading to the contact page.

### A3. Gallery and tattoo detail

- The gallery shows only **published** tattoos. Style pills at the top filter the list.
- Click any card to open the tattoo’s page: photo set (click a photo to view full-screen, swipe on a phone), any healing *video*, a fact panel (style, placement, size, sessions, hours, year, price range if set), the story behind the piece, and related tattoos from the same artist or style.

- A “Book this style” button sends the visitor to the contact form. If the tattoo belongs to an artist, “Book with [artist]” pre-selects that artist.

## A4. Artists

The artists page lists everyone the studio has marked as *active* in the admin. Opening a profile shows the portrait, biography, specialties, experience and their work. Artist pages only exist for active artists.

## A5. About & A6. Aftercare

Both are informational pages that the studio keeps current; they need no visitor action.

## A7. Contact and sending an enquiry

The contact page has the studio phone, WhatsApp, e-mail, physical address, opening hours and a map link on one side, and the enquiry form on the other.

The enquiry form collects:

| Field                                        | Required? | Notes                                                                               |
|----------------------------------------------|-----------|-------------------------------------------------------------------------------------|
| Your name                                    | Yes       |                                                                                     |
| WhatsApp number                              | Yes       | The studio replies here.                                                            |
| Email                                        | Yes       |                                                                                     |
| Preferred artist                             | No        | Drop-down of active artists, or “No preference”.                                    |
| Tattoo idea                                  | Yes       | Free text.                                                                          |
| Tattoo style / Body placement / Approx. size | No        | Pick lists. “Not decided” / “Flexible” are fine.                                    |
| Preferred date                               | No        | A date picker.                                                                      |
| Budget range                                 | No        | Pick list or “Flexible”.                                                            |
| Reference image                              | No        | Optional photo of the idea. <b>This image is private</b> — only the studio sees it. |

When the visitor taps “Send enquiry”, the lead lands in the studio’s admin Enquiries inbox (B8). The form confirms the submission; the studio usually replies on WhatsApp within a day.

*Required fields are flagged as you type. If something is wrong, a friendly message appears next to the field — nothing is lost.*

## A8. Using the site on a phone

- The whole site is designed mobile-first: menus collapse, photo grids go single-column, and the enquiry form is easy to fill on a phone.
- Photos open a full-screen lightbox; pinch or swipe to move between pictures.
- Videos play inline and full-screen-capable.
- If a tattoo that was open is unpublished (removed) by the studio, visitors see a friendly “not found” page instead of an error.

**What can go wrong on the public site:** if a required service (e.g. the live database) is briefly unreachable, pages show a calm “Something went wrong loading” message with a refresh. This is rare and self-heals.

## Part B — The admin area (studio CMS)

### B1. Signing in

- Open `/admin/login` on your website (e.g. `yourdomain.com/admin/login`).
- Enter the e-mail and password the studio uses (created once when the site goes live). Tap **Sign in**.
- The session is remembered on that browser (Time — you stay signed in until you sign out).
- If you forget the password, use the **“Forgot password?”** link on the login screen — a reset link is e-mailed to you, and it works straight from your phone.

**Demo mode (no password needed):** until the site is connected to a live database, the admin runs in a “demo” mode where the screen shows sample login details pre-filled. Tap “Sign in” to browse every admin screen. Changes are only saved in the demo environment, which is fine for learning the layout. See Part C.

Only the studio staff can get past the login screen. Every admin page is protected automatically.

### B2. Dashboard

The first screen after signing in. It summarises the whole studio at a glance:

- **Counters** — published tattoos, number of artists, new enquiries waiting, featured pieces, and how many tattoos are in the “been sketched but not approved” drafts.
- **Backend status** — shows whether the site is in live (Supabase) or demo mode.
- **Latest enquiries** — the newest leads with their status, so you never miss a booking.
- **Quick actions** — one-tap shortcuts to add a tattoo, open enquiries, or edit the homepage.

### B3. Tattoos

**List screen (Tattoos in the menu):** every tattoo as a card with its cover photo, title, artist, style and two switches:

| Switch           | What it does                                                                                                                                   |
|------------------|------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Published</b> | <b>ON</b> = the tattoo appears on the public site (gallery, search engines, artist page). <b>OFF</b> = invisible to everyone except the admin. |
| <b>Featured</b>  | <b>ON</b> = the tattoo can appear on the homepage featured grid and in the Instagram strip.                                                    |

Use the **Edit** pencil to change the piece or the trash icon to delete it (deletion is immediate — you are asked to confirm first).

**Add or edit a tattoo (button “Add tattoo” / Edit):**

| Field                   | What it’s for                                                                                     |
|-------------------------|---------------------------------------------------------------------------------------------------|
| Title *                 | Shown on the card and page. Make it the design’s name (e.g. “Ember Veil”).                        |
| Artist                  | Who drew it. Drives “related work” and the artist’s page.                                         |
| Style                   | Free-text style label (e.g. “Fine line”).                                                         |
| Category (Style filter) | Pick from the Styles you manage in B5. This decides which gallery filter the piece appears under. |

|                                                          |                                                                     |
|----------------------------------------------------------|---------------------------------------------------------------------|
| Placement, Size, Price, Sessions, Hours (duration), Year | Public fact panel. Left blank where unknown.                        |
| Description *                                            | The story behind the piece — shown on the detail page.              |
| Design notes                                             | Internal note about the design (shown publicly on the detail page). |
| Published / Featured                                     | The two visibility switches described above.                        |

## Photos, video and the cover

The media manager is the heart of the tattoo screen:

1. **Add photos** — tap to choose photos (from your phone gallery or computer). Up to 8 MB each; add as many as you like.
2. **Reorder** — drag the left/right arrows to change the order; the first photo is the thumbnail on cards.
3. **Set the cover** — tap the star on any photo to mark it as the card thumbnail. A gold star shows which one is active.
4. **Replace** — each photo has remove (trash) and replace buttons; replacing swaps the file without breaking the page.
5. **Add a video** — a healing/video of the piece. You can upload a video file (up to ~200 MB) or paste a link. The studio-picked cover image is used as the video poster.
6. **Save** — everything (photo ordering, cover, removed files) is written to the site's storage in one go. A toast on screen confirms success or explains the problem in plain words.

**Publishing tip:** save the tattoo first as a draft ( **Published OFF** ), review it on the front of the site, then flip Published ON when happy. A counter on the dashboard shows how many drafts are waiting.

## B4. Artists

- **Add artist** — name, role, short bio, full bio, specialties, experience in years, Instagram username, and a **portrait photo** (uploaded through the same file picker).
- **Active switch** — ☐ **ON** shows the artist on the public Artists page and allows them to be selected on the contact form. ☐ **OFF** removes them from the public site but keeps their profile for later.
- **Featured switch** — highlights a lead artist where the design calls for it.
- Edit and delete work like tattoos (confirm before deleting).

## B5. Styles (gallery categories)

These become the filter pills on the gallery. You can:

- **Add a style** — e.g. "Ornamental", "Realism", "Blackwork".
- **Hide a style** — it stops appearing publicly (use instead of deleting, so existing tattoos keep their style quietly).
- **Reorder** — move styles up/down to set the order the pills appear.
- **Delete** — removes the style and its tattoos move to "uncategorised" (they stay published).

## B6. Reviews (client stories)

- **Add review** — client name, the review text, the tattoo style it relates to (and optionally which tattoo), and a star rating (1–5).
- **Published switch** — drafts stay hidden until you approve them; the homepage shows up to six published reviews.
- **Featured** — controls prominence/heart ordering on the testimonial cards.

## B7. Offers

- **Add offer** — title, description, optional image, button label, and where the button goes (usually the contact page).
- **Start / end dates** — optional. An offer is shown to the public only while today is inside its date window; leave both empty for an evergreen offer.
- **Published switch** — the master on/off. A drafted offer never appears.
- Up to three live offers appear on the homepage offers strip; all live offers appear on their own public section.

## B8. Enquiries (the inbox)

Every contact-form submission lands here, newest first, with the name, phone / WhatsApp number, e-mail, the idea, and the details chosen on the form.

- **Status pipeline** — move each lead through its lifecycle. The dashboard counts "new" ones so nothing sits.
- **Filter bar** — show only New, or filter by any status, to focus.
- **WhatsApp reply** — each enquiry has a button that opens WhatsApp to that number with the enquiry pre-loaded — reply instantly.
- **Reference photo** — if the visitor attached one, a small thumbnail opens a full-size viewer. It is stored privately.
- **Delete** — remove a lead (confirm first).

| Status    | Meaning                         |
|-----------|---------------------------------|
| New       | Just arrived — needs attention. |
| Contacted | We reached out.                 |

|              |                                                   |
|--------------|---------------------------------------------------|
| Consultation | Booked or held a consultation.                    |
| Booked       | Hey are tattoo session is booked.                 |
| Completed    | Work done and healed-out.                         |
| Cancelled    | Did not go ahead.                                 |
| Archived     | Greyed out / tucked away — nothing further to do. |

## B9. Website details

One screen for the studio's identity used across the whole site:

- **Business** — studio name and tagline.
- **Contact** — WhatsApp number (used by the enquiry reply button), phone, e-mail, postal address and Google Maps link.
- **Opening hours** — per weekday: opening time, closing time, or "closed" for that day.
- **Social links** — Instagram handle/URL (the sitewide "Follow" buttons), optional Facebook and YouTube.

Save applies the changes across the site immediately.

## B10. Homepage content

This screen lets you rewrite the homepage copy without touching code:

| Section              | Editable fields                                                                               |
|----------------------|-----------------------------------------------------------------------------------------------|
| Hero                 | Heading (start a new line to split the two-line look), subheading, and the two button labels. |
| Featured work        | Heading + description above the featured grid.                                                |
| Studio               | Heading + description for the “why” text.                                                     |
| Final call-to-action | Heading, description and button label at the bottom of the home page.                         |

**Split a heading:** type a line break (Enter) inside the hero heading field — each line is styled as a separate banner line. While you edit, you can leave and come back; only “Save” applies it.

## B11. Help & signing out

- The **Help** page in the admin explains each section, the publish rules and the demo/live modes.
- Sign out from the sidebar at any time. This is also the safest way to leave a shared phone.

**Private data warning:** enquiries and reference photos are never shown on the public site. Only signed-in staff can see them. Do not share your admin password, and never put it in a message.

## Part C — Running the site

### C1. Demo mode vs. live mode

|                              | Demo mode (no database)                                                       | Live mode (Supabase, production)               |
|------------------------------|-------------------------------------------------------------------------------|------------------------------------------------|
| Starts when                  | No live keys are configured on the server                                     | The live keys are configured                   |
| Where data lives             | This browser only (protected storage in the browser)                          | The studio's cloud database                    |
| Who sees admin changes       | Only this device/browser                                                      | Everywhere — the public site updates instantly |
| Good for                     | Learning the admin, design review                                             | Real customers, real bookings, real media      |
| Can it be mistaken for live? | Yes — the dashboard visibly prints "Demo mode" so the studio can't be fooled. | Dashboard prints "Live" status.                |

### C2. Going live (one-time setup, ~30 minutes)

1. **Create a Supabase project** at supabase.com (free tier is enough to start).
2. **Apply the database schema** — open the SQL Editor, paste the contents of `supabase/schema.sql` (in the project files), and run it. This creates all tables, security rules, storage buckets and helper functions.
3. **Add the studio login** — under Supabase "Authentication → Users", create the studio e-mail account. It is automatically given the admin role.
4. **(Optional) load the demo content** — run `npm run db:seed` with the project's server-side key to import the starter portfolio, artists, styles, reviews, offers and default website text. (PowerShell example in the README.)
5. **Configure the site** — set two environment values on the host: `VITE_SUPABASE_URL` and `VITE_SUPABASE_ANON_KEY` (from Supabase → Project settings → API).
6. **Deploy on Vercel** — connect the repository, add those two values under Environment Variables, deploy. Your site (and `/admin`) is now live at your domain.

Full, copy-paste instructions live in the repository `README.md`.

### C3. Where your data and files live

- **Tables** (Supabase Postgres): tattoos, tattoo images, tattoo videos, artists, categories, reviews, enquiries, offers, site settings.
- **Files** (Supabase Storage buckets): `tattoos`, `artists`, `reviews`, `website` are public; `enquiries` is private (reference photos).
- **Rules of thumb:** public visitors can only read *published/in-date/active* records; enquiries are write-only from the public form and read-only in admin; the admin can edit everything.
- Tattoo URLs never break: each tattoo keeps a stable name (e.g. `/gallery/tattoo-07`) even after photos are replaced.

### C4. Troubleshooting

| Symptom                         | Likely cause & fix                                                                           |
|---------------------------------|----------------------------------------------------------------------------------------------|
| Admin falls back to "Demo mode" | The two environment values are missing/empty on the host. Add them and redeploy (C2 step 5). |

|                                         |                                                                                                                                  |
|-----------------------------------------|----------------------------------------------------------------------------------------------------------------------------------|
| Can't sign in                           | The studio account isn't in Supabase "Authentication → Users", or its admin role wasn't applied. Check the README step 3.        |
| Public page says "Something went wrong" | Usually a missing migration or table. Run <code>schema.sql</code> again, then hard-refresh.                                      |
| Photo/video won't upload                | File too large (images > 8 MB, videos > ~200 MB), or storage buckets/policies weren't created — re-run <code>schema.sql</code> . |
| A removed tattoo still shows            | Published is still ON for it, or the browser cache — flip Published OFF (B3) and refresh the public page.                        |
